```
• awk  
cond {  
    code  
}
```

no cond \Rightarrow executes code for every line in input

- f \rightarrow to execute code from file

- F \rightarrow overwrite field separator

- v \rightarrow assign variable / overwrite variable

\$ 0 \rightarrow index of record (default \rightarrow line)

\$ 1, 2, ..., n \rightarrow index of fields in the current record.

```
BEGIN {
```

```
    ....
```

```
}
```

} \rightarrow only executed once at the beginning.

END ↖
...
↵ } → only executed once at the end
