

# Web Deployment

Seminary 5

---

# Frameworks

- [AWS Lambda](#): 1 million requests free
- [Google Cloud AI Platform](#) \$300 in free credits
- [Azure Machine Learning](#) \$200 credit
- [Heroku](#) 0.010\$/hour
- [Render](#) free 500mins/month (5\$ for each extra 1000mins)

# House score prediction example

- <https://github.com/ileniTudor/deploy-flask-dip>
- Deployed on Heroku using this [youtube tutorial](#)

# Milestone 5 (due to week 11, 12)

---

- Deploy you app/model
  - on cloud
  - Local host
  - Edge device
  - etc...
- Prepare **one page PDF** with the description of the deploy system:
  - List the technologies used
  - The link you can find the app (if deployed on the web)
  - Description of the API call, to access the AI model (if any)
  - Screen shots with the app, calls, results (whatever relevant)
